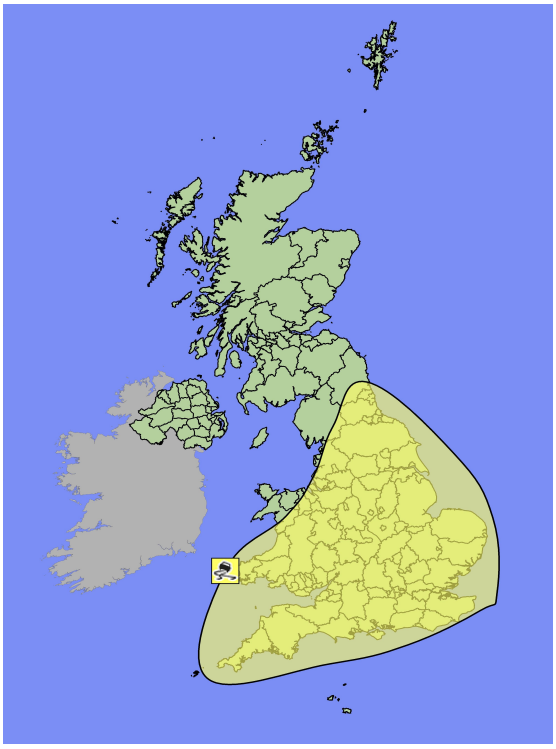
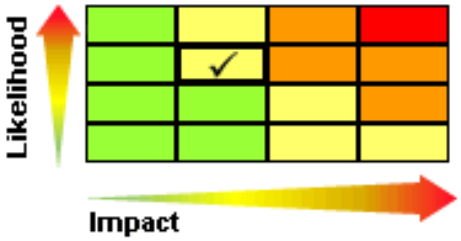
# National Severe Weather Warning Service





## CANCELLED

**Chief Forecasters Assessment**
Another night with icy surfaces as temperatures fall below freezing. However, a further frontal system may edge into southern Britain on Tuesday increasing the risk of further localised falls of snow during the day. However, computer models are still giving mixed signals regarding its extent and precise location so things remain very uncertain at this stage.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **00:05 on Tue, 22nd Jan 2013** until **23:55 on Tue, 22nd Jan 2013**

As temperatures fall below freezing on Monday night into Tuesday morning icy stretches are likely on untreated surfaces especially in areas where any further sleet, snow or rain has fallen on Monday. In addition, further rain reaching the extreme southwest on Monday night will lead to an enhanced risk of ice in southwest England. This may extend north and east into parts of Wales on Tuesday and move east to affect some other parts of southern England, readily turning to sleet and snow, giving further localised snow accumulation. Further snow flurries may affect east coasts. However the extent of any wintry precipitation is very uncertain at this stage. The public should be aware of the risk of travel disruption. Please see the yellow warning of snow which gives an idea of the areas considered more at risk.

**For more details please go to:**
